

Six easy steps to getting different text in Halo CE

by:ethanbob95

ONE – first go to you're my computer icon on the desktop and click on it, if you don't have you're my computer icon its probably some where under the start menu.

TWO- now go to local disk C:/program files/Microsoft games/Halo/CONTENT.

THIRD- ok now there will be rar. Files with log or edit box at the end. They will all have numbers, do this to every one of the files but NOT at the same time: open and select notepad to open up with.

FOURTH- now there is a bunch of text all over the place, some thing will say font = Verdana Narrow-... like this example<ksml>

```
<head/>
```

```
<body>
```

```
<editbox width="420" left="90" top="458" background="gallery\editbox480.png"
  id="oEditbox" ime="false" tabindex="0" maxlength="64"
  font="Verdana Narrow-10-bold" color="#ffffff"
/>
```

```
<label left="0" top="462" width="90" text="Prompt" id="oPrompt"
  font="Halo-12-bold" color="#ffffff"
/>
```

```
</body>
```

```
</ksml>
```

now I have highlighted it to make it clear.

FIFTH- ok now look at the font you want and highlight the Verdana Narrow and type the EXACT name of the font. DO NOT high light any thing but the name or it might cause problems during game play.

SIXTH- o pen halo and open a new server, type anything by pressing T or the default you chose to use to talk. If you do it right, it will work.

NOTE; this can also be used in normal Halo if you would like. If any problems occur, please contact me at "ethanbob95@yahoo.com"
